

LYTE C

Electrolytes in combination with Vitamin C

Characteristics

Complementary feed for horses and ponies. Prequine Lyte C is a carefully formulated product, produced according to GMP+ FSA quality guidelines. Prequine Lyte C is a balanced mix of physiological salts known to be essential to a normal body function. Prequine Lyte C is formulated for quick and efficient replacement of vital electrolytes. It rapidly replaces minerals lost during competition, strenuous exercise and transport. Diluted in drinking water, the combination of sodium, potassium and calcium will rapidly compensate dehydration and mineral loss during training/sport. Furthermore, vitamin C is added because of its strong anti-oxidative properties. During training and competition free radicals are formed, where vitamin C functions as a free radical catcher to protect the body cells after intensive exercise.

Directions for use

Mix with feed or dilute in 4 – 5 L drinking water.
 Horses: 1 x 50 g before the event or training, repeat during or after the event if necessary.
 Ponies: Half of the above-mentioned quantities.

Precautions

Next to Prequine Lyte C no other supplementary electrolytes should be used simultaneously. Make sure horses always have unlimited access to drinking water.

Storage

Store dark and dry at 15-25°C.
 Close packaging after each use.
 Keep out of sight and reach of children.

Presentation

Bucket à 2 kg. Bucket à 4 kg. Bucket à 10 kg. Sachet à 50 g.

Shelf life

3 years from manufacturing date (MFD).

Composition

Contains per kg:
 Dextrose, Sodium chloride 60 g, Potassium chloride 57 g, Dicalcium phosphate, Calcium carbonate.

Feed additives per kg:
 Vitamins: 3a300, Vitamin C, 52 g.
