

SANDILAX

Aiding in sandy issues

Characteristics

Feed material for horses and ponies.

Prequine Sandilax consists of whole psyllium seeds and can be used to aid in sand related digestive issues, often occurring in horses on sandy pastures.

Psyllium supplementation enhances the passage of ingested sand from the gastrointestinal tracts of horses as the fibre in psyllium forms a gel-like substance that helps to move the sand through the digestive tract and will be defecated. Therefore, it is advised as an aid in cases of sand build up in the horses' digestive tract.

This can be done on higher doses as an aid in case of problems occurring and a high build up, and also preventative in lower doses in order to assist in the prevention of build-up.

Directions for use

Mix with feed, dry or wet.

Horses:

Treatment: 2 x 100 grams for 7-10 days.

Preventative: 2 x 50 grams once a month for 7-10 days.

Ponies: Half of the above-mentioned quantities.

Storage

Store dark and dry at 15-25°C.

Close packaging after each use.

Keep out of sight and reach of children.

Presentation

Bucket à 3,5 kg.

Bucket à 12 kg.

Shelf life

See expiration date.

Composition

Contains:

Plantago seed (Psyllium seed) (100%).
